If you look at the bottom of this page I'm pretty sure you will find the. error, rather than close the prompt, it will tell you that the. either provide a serial number or contact.Q: Best practice for making a copy of an AWS RDS instance with parameterized security groups In an effort to make a copy of my RDS instance, I want to make the copy with the same security group, but give it an unique identifier. For this, I need to create a new security group with the same name and parameters as the previous security group. Usually, to have the same IP range for all my instances, I use a parameter called instance-group-list and I use the following syntax: aws rds modify-db-instance --db-instance-identifier \$instance_identifier --instance-group-identifier \$group_id --instance-group-list \$GROUP_LIST_ARG --tags \$tags --query 'DBInstances[*].Endpoint' --output text So, to be able to change the unique identifier for a copy, I had to generate a new instance-group-list and give it the unique identifier on this new instance-group-list: aws rds modify-db-instance --db-instance-identifier \$instance_identifier --instance-group-identifier \$group_id --instance-group-list \$GROUP_LIST_ARG --tags \$tags --query 'DBInstances[*].Endpoint' --output text My question is: is this the best practice to copy RDS instances or am I missing something? Also, I would like to know if there is a way to do that in one command without having to use aws rds modify-db-instance. A: If you
